

Traffic barrier | Shelving protection

Reference : 15607

Description :

Shelving protection is ideal for protecting racks from collisions. Traffic barriers on loading docks limit the risk of collision and allow goods to be distributed correctly across loading areas. It is distinguished by the fact that the dents automatically disappear after the collision. Thanks to its flexible properties, the shelving protection material returns to its original shape and appearance after impact. No replacement or repair is therefore necessary after a collision. Color: yellow Dimension: H 500 mm Height of the horizontal cross members adjustable by the user. Fixing by anchors for fixing to the concrete floor

Benefits :

- Protective barrier with two cross members for handling areas with heavy traffic.
- Extremely impact resistant.
- Keeping their shape, appearance and characteristics after collision.

Technical specifications :

Product Name	Traffic barrier Shelving protection
SKU	15607
Weight (kg)	1.000000
Application	Atelier, Entrepôt, Logistique, Signalisation, Stockage
