

Protective barrier for walls and machines | PROTECTION BARRIER

Reference : 18561

Description :

The protective barrier is the ideal and economical solution to protect the base of vulnerable structures and expensive machinery. It is also used to delimit traffic and define routes for vehicles and AGV automatic trolleys. Made of polymer, the protection flexes and absorbs the impact then returns to its original appearance. No replacement or repair is therefore necessary after a collision. - Colours: yellow

- Size: H 200 mm
- Sturdy ground fixing with chemical anchor included

Benefits :

- Quick installation and assembly near critical points: walls, plasterboard and machinery.
- Extremely impact resistant, the protection flexes and absorbs the impact then returns to its original appearance.
- Delimits traffic and defines routes for vehicles and automatic trolleys.
